PERMABOND® TA4610
Toughened Acrylic Adhesive
Provisional Technical Datasheet

Features & Benefits
- Adhesion to a wide variety of substrates
- Full cure at room temperature
- Bonds polyolefins
- No primer required
- Good impact strength
- Good chemical resistance

Description
PERMABOND® TA4610 is a 2-part, 1:1 toughened acrylic adhesive. It has been developed to bond low surface energy plastics such as polypropylene and polyethylene – with no primer or surface treatment required. It can also be used to bond a wide variety of other materials such as metals and composite materials and is ideal for bonding dissimilar surfaces.

Typical Curing Properties

- Shear strength
  - Polypropylene: 5-8 N/mm² (725-1200 psi)*
  - Polyethylene: 3-6 N/mm² (435-870 psi)*
  - Aluminium / PE: 3-6 N/mm² (435-870 psi)
  - PTFE: 1.5 N/mm² (220 psi)
  - ABS: >4 N/mm² (>580 psi)*
  - Poly carbonate: >5 N/mm² (>725 psi)*
  - PVC: >5 N/mm² (>725 psi)*
  - EPDM: 3-5 N/mm² (435-725 psi)*
  - PA6: 3-5 N/mm² (435-725 psi)

*Substrate failure was observed.

Strength Development

Graph shows typical strength development of bonded components at 23°C. Curing at higher or lower temperatures may affect cure speed.

Hot Strength

Fully cured lap shear specimens conditioned to pull temperature for 30 minutes before testing at temperature. TA4610 can withstand higher temperatures for brief periods (such as for paint baking and wave soldering processes) providing the joint is not unduly stressed. The minimum temperature the cured adhesive can be exposed to is -55°C depending on the materials being bonded.

The information given and the recommendations made herein are based on our research and are believed to be accurate but no guarantee of their accuracy is made. In every case we urge and recommend that purchasers before using any product in full-scale production make their own tests to determine to their own satisfaction whether the product is of acceptable quality and is suitable for their particular purpose under their own operating conditions. THE PRODUCTS DISCLOSED HEREBE ARE SOLD WITHOUT ANY WARRANTY AS TO MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE OR ANY OTHER WARRANTY, EXPRESS OR IMPLIED.

No representative of ours has any authority to waive or change the foregoing provisions, but, subject to such provisions, our engineers are available to assist purchasers in adapting our products to their needs and to the circumstances prevailing in their business. Nothing contained herein shall be construed to imply the non-existence of any relevant patents or to constitute a permission, inducement or recommendation to practice any invention covered by any patent, without authority from the owner of this patent. We also expect purchasers to use our products in accordance with the guiding principles of the Chemical Manufacturers Association’s Responsible Care® program.

Additional Information

This product is not recommended for use in contact with strong oxidizing materials. This product may affect some thermoplastics and users must check compatibility of the product with such substrates. Information regarding the safe handling of this material may be obtained from the safety data sheet (SDS). Users are reminded that all materials, whether innocuous or not, should be handled in accordance with the principles of good industrial hygiene.

This Technical Datasheet (TDS) offers guideline information and does not constitute a specification.

Surface Preparation

Surfaces should be clean, dry and grease-free before applying the adhesive. Polylefin surfaces may have traces of mold release agent present – wipe with isopropanol (IPA) solvent and allow to fully evaporate before bonding. If bonding to metal: some metals such as aluminium, copper and its alloys will benefit from light abrasion with emery cloth (or similar) to remove the oxide layer.

Directions for Use

1) Surfaces must be clean, dry and grease-free prior to bonding.
2) Apply a thin bead of adhesive pre-mixed through a static mixer nozzle.
3) Assemble components and clamp.
4) Maintain pressure until handling strength is achieved. The time required will vary according to the joint design and surfaces being bonded.
5) Allow 36-48 hours for adhesive to fully cure.

NB: Adhesive outside of a closed joint (i.e. excess material) will cure more slowly and may feel soft due to air contact. Adhesive inside the joint will cure solid.

Other Products Available

Anaerobics
- Thread lockers
- Thread sealants
- Gasket makers
- Sealants / retainers

Cyanoacrylates
- Instant adhesives
- For rapid bonding of metals, plastics, rubber and many other materials

Epoxies
- Two-part room temperature cure adhesives
- Single-part heat cure adhesives
- Modified Technology (MT) flexible grades available

MS-Polymers
- Single-part, moisture-curing, flexible sealants

Polyurethanes
- Two-part room temperature curing adhesives

Toughened Acrylics
- Rapid curing, high strength structural adhesives

UV Light Cured Adhesives
- Glass / plastic bonding
- Optically clear
- Non-yellowing

Storage & Handling
