PERMABOND® TA4610
Toughened Acrylic Adhesive
Technical Datasheet

Features & Benefits

- Adhesion to a wide variety of substrates
- Full cure at room temperature
- Bonds polyolefins
- No primer required
- Good impact strength
- Good chemical resistance

Description

PERMABOND® TA4610 is a 2-part, 1:1 toughened acrylic adhesive. It has been developed to bond low surface energy plastics such as polypropylene and polyethylene – with no primer or surface treatment required. It can also be used to bond a wide variety of other materials such as metals and composite materials and is ideal for bonding dissimilar surfaces.

Typical Curing Properties

- Ratio of use: 1 : 1
- Maximum gap fill (NB: Contains microparticles to control gap): 1 mm (0.04 in)
- Pot life (2g+2g) @23°C: 5-8 minutes
- Fixture time (0.1 N/mm² shear strength is achieved) @23°C: 12-15 minutes
- Handling time (0.3 N/mm² shear strength is achieved) @23°C: 40-50 minutes
- Working strength @23°C: 6-8 hours
- Full cure @23°C: 24-36 hours

The information given and the recommendations made herein are based on our research and are believed to be accurate but no guarantee of their accuracy is made. In every case we urge and recommend that purchasers before using any product in full-scale production make their own tests to determine to their own satisfaction whether the product is of acceptable quality and is suitable for their particular purpose under their own operating conditions. The products disclosed herein are sold without any warranty as to merchantability or fitness for a particular purpose or any other warranty, express or implied. No representative of ours has any authority to waive or change the foregoing provisions but, subject to such provisions, our engineers are available to assist purchasers in adapting our products to their needs and to the circumstances prevailing in their business. Nothing contained herein shall be construed to imply the non-existence of any relevant patents or to constitute a permission, inducement or recommendation to practice any invention covered by any patent, without authority from the owner of this patent. We also expect purchasers to use our products in accordance with the guiding principles of the Chemical Manufacturers Association’s Responsible Care® program.

**Additional Information**

This product is not recommended for use in contact with strong oxidizing materials. This product may affect some thermoplastics and users must check compatibility of the product with such substrates.

Information regarding the safe handling of this material may be obtained from the safety data sheet (SDS). Users are reminded that all materials, whether innocuous or not, should be handled in accordance with the principles of good industrial hygiene.

This Technical Datasheet (TDS) offers guideline information and does not constitute a specification.

**Surface Preparation**

Surfaces should be clean, dry and grease-free before applying the adhesive. Polylefinsurfaces may have traces of mold release agent present – wipe with isopropanol (IPA) solvent and allow to fully evaporate before bonding. If bonding to metal: some metals such as aluminium, copper and its alloys will benefit from light abrasion with emery cloth (or similar) to remove the oxide layer.

**Directions for Use**

1. Surfaces must be clean, dry and grease-free prior to bonding.
2. Apply a thin bead of adhesive pre-mixed through a static mixer nozzle.
3. Assemble components and clamp.
4. Maintain pressure until handling strength is achieved. The time required will vary according to the joint design and surfaces being bonded.
5. Allow 24-36 hours for adhesive to fully cure.

NB: Adhesive outside of a closed joint (i.e. excess material) will cure more slowly and may feel soft due to air contact. Adhesive inside the joint will cure solid.
