Features & Benefits
- Cure on demand
- High shear strength
- Fast curing with low power lamps
- 100% solids, no solvents
- Excellent adhesion to metal and glass

Description
PERMABOND® UV610 is a single part, fast setting, UV curable adhesive designed specifically for bonding glass and metal. Its high strength makes it suitable for a wide range of applications including glass furniture where it is possible to create high strength edge joints.

Physical Properties of Uncured Adhesive

<table>
<thead>
<tr>

<td>1.0</td>
</tr>
</tbody>
</table>

Typical Curing Properties

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>
</thead>
<tbody>
<tr>
<td>Typical fixture time*</td>
<td>Low power 4mW/cm² battery lamp: 10 secs</td>
</tr>
<tr>
<td></td>
<td>LED 100mW/cm² lamp: 2 secs</td>
</tr>
<tr>
<td></td>
<td>UV light guide 30W/cm²: 1 sec</td>
</tr>
<tr>
<td>Cure wavelength</td>
<td>365 - 400 nm**</td>
</tr>
</tbody>
</table>

*The cure time depends on the power of the UV lamp, its spectral output, the distance between the lamp and the components, and the transmission characteristics of the substrates.

*LED UV lamps have a narrow range of spectral output. It is important to check suitability with Permabond in order to match the LED lamp’s peak wavelength with that of the adhesive’s photoinitiator to ensure optimal adhesive cure.

Typical Performance of Cured Adhesive

<table>
<thead>
<tr>
<th>Property</th>
<th>Value</th>
</tr>

<tbody>
<tr>
<td>Tensile strength (ASTM D-2095-69) steel to glass*</td>
<td>13-16 N/mm² (1900 psi – 2300 psi)</td>
</tr>
<tr>
<td>Tensile strength (ISO37)</td>
<td>17 N/mm² (2500 psi)</td>
</tr>
<tr>
<td>Refractive index (cured)</td>
<td>&gt;1.490</td>
</tr>
<tr>
<td>Elongation (ISO37)</td>
<td>95%</td>
</tr>
<tr>
<td>Hardness (ISO868)</td>
<td>65-75 Shore D</td>
</tr>
<tr>
<td>Dielectric strength</td>
<td>12 KV/mm</td>
</tr>
<tr>
<td>Dielectric constant 1MHz@25°C</td>
<td>4</td>
</tr>
<tr>
<td>Water absorption (ISO62)</td>
<td>2 hours in boiling water 3%</td>
</tr>
</tbody>
</table>

*Strength results will vary depending on the level of surface preparation and gap.

Hot Strength

![Graph showing percentage strength retained vs. temperature](image-url)

*Hot strength* shear strength tests performed on glass to mild steel. Fully cured specimens conditioned to pull temperature for 30 minutes before testing at temperature.

UV610 can withstand higher temperatures for brief periods (such as for paint baking and wave soldering processes) providing the joint is not unduly stressed. The minimum temperature the cured adhesive can be exposed to is -55°C (-67°F) depending on the materials being bonded.
Additional Information
This product is not recommended for use in contact with strong oxidizing materials.
Information regarding the safe handling of this material may be obtained from the Safety Data Sheet.
Users are reminded that all materials, whether innocuous or not, should be handled in accordance with the principles of good industrial hygiene.

This Technical Datasheet (TDS) offers guideline information and does not constitute a specification.

Surface Preparation
Surfaces should be clean, dry and grease-free before applying the adhesive. Particular care should be taken to remove silicone based cleaning agents which may have been used previously to clean glass. Some metals such as aluminium, copper and its alloys, will benefit from light abrasion with emery cloth (or similar) to remove the oxide layer. Isopropanol can be used to degrease most surfaces. Where thermoplastic surfaces are involved we recommend tests are done to ensure compatibility, mold release agents may affect bond strength.

Directions for Use
1) Adhesive can either be applied directly from the bottle or dispensed via automated dispensing equipment for more accurate dosing. Minimise exposure of product to ambient light.
2) It is important to try to prevent air entrapment within the joint as this could be detrimental to the finished appearance of the adhesive.
3) Parts should be firmly held and not disturbed during cure. Expose the joint to ultra-violet light for the appropriate time to ensure full cure. Cure time depends on the power of the UV lamp, its spectral output, the distance between the lamp and the components, and the transmission characteristics of the substrates.
4) For help selecting a suitable lamp and/or dispensing equipment, please contact the Permabond technical helpline.

Other Products Available

- Anaerobics
  - Thread lockers
  - Thread sealants
  - Gasket makers

- Cyanoacrylates
  - Instant adhesives
  - For rapid bonding of metals, plastics, rubber and many other materials

- Epoxies
  - Two-part room temperature cure adhesives
  - Single-part heat cure adhesives
  - Modified Technology (MT) flexible grades available

- MS-Polymers
  - Single-part, moisture-curing, flexible sealants

- Polyurethanes
  - Two-part room temperature curing adhesives

- Toughened Acrylics
  - Rapid curing, high strength structural adhesives

- UV Light Cured Adhesives
  - Glass / plastic bonding
  - Optically clear
  - Non-yellowing

Storage & Handling
Storage Temperature
5 to 25°C (41 to 77°F)
Protect liquid adhesive from room lighting.
