Adhesives are a cost-effective solution for sealing heat exchanger tubes onto end-plates and are popular alternatives to welding or brazing. The result is a superior leak-free assembly.

Adhesives offer design engineers the opportunity to choose lightweight but durable non-metal substrates and to combine dissimilar materials without sacrificing performance requirements.

Permabond adhesives offer excellent resistance to oil, water, coolants, and gases. This makes them suitable for assembly and repair of all sizes of heat exchangers in a variety of industries, such as automotive, HVAC, and marine.

Permabond® Adhesive and Sealant Features & Benefits

Benefits of Permabond adhesives and sealants over welding or brazing

- Less skill involved - no need for a trained welder
- Reduced workplace hazards - no oxy-acetylene needed
- No pin prick weld holes; improved sealing
- More choice in terms of using dissimilar materials, plastics, and metals
- Adhesives available with metallic color to give a good aesthetic appearance
- Reduced costs

Ideal for bonding:

- ABS
- Acrylic
- Aluminium
- Carbon Fibre
- Composite
- EPDM
- Ferrite
- FRP & GRP
- Glass
- Laminate
- Leather
- Nylon
- Phenolic
- Polycarbonate
- Polyethylene*
- Polypropylene*
- Polystyrene
- PVC
- Rubber
- Steel
- Titanium
- Zinc

+Many more materials

*Specific grades only
Here is a small selection of our most popular adhesive grades suitable for use in a range of heat exchanger applications. If you can’t see exactly what you require, please contact our technical advisors with information about your application and your particular requirements and we will make a recommendation. The Permabond team provides support through the design phase, sample trials and production line integration. Whether you require technical support, custom formulations or small batch production, please contact us.

### Adhesives for Heat Exchangers

<tr>
<td>Permabond UV7141</td>
<td>UV and anaerobic curing adhesive for bonding metals and other substrates.</td>
<td>Heat exchangers - for sealing around tubes.</td>
<td>UV light and Anaerobic - lack of oxygen, presence of metal</td>
<td>1,350</td>
<td>5 seconds</td>
<td>(17) 2,500</td>
</tr>
<tr>
<td>Permabond E5558</td>
<td>Flows like solder when heated</td>
<td>Heat exchangers - for flowing and sealing around tubes</td>
<td>No mix, heat cure (oven) or induction</td>
<td>200,000</td>
<td>60 mins (full strength at 150°C / 300°F oven cure)</td>
<td>(41) 6,000</td>
</tr>
<tr>
<td>Permabond E5550</td>
<td>Toughened epoxy, excellent chemical and temperature resistance</td>
<td>Heat exchangers - for creating fillets around the tubes / endplates. Bonding heat exchanger fins</td>
<td>No mix, heat cure (oven) or induction</td>
<td>1,500,000</td>
<td>60 mins (full strength at 150°C / 300°F oven cure)</td>
<td>(41) 6,000</td>
</tr>
<tr>
<td>Permabond MT3809</td>
<td>Flexible epoxy - ideal for plastic and metal</td>
<td>Potting/sealing flutes in cooling devices</td>
<td>Two component room temperature cure</td>
<td>12,500</td>
<td>30 mins (full cure in ≥72 hours)</td>
<td>(8) 1,200</td>
</tr>
<tr>
<td>Permabond MT382</td>
<td>Flexible epoxy - ideal for metal</td>
<td>Potting/sealing flutes in cooling devices</td>
<td>Two component room temperature cure</td>
<td>21,500</td>
<td>2 hours (full cure in ≥72 hours)</td>
<td>(7) 1,000</td>
