## Permabond Optically Clear Adhesive

SOMERSET, NJ - Permabond's UV620 is a high strength adhesive which cures when exposed to UV light. Its excellent optical clarity and resistance to yellowing make it ideal for bonding glass as well as metals. Product is free flowing and self leveling but cures very quickly with low intensity UV light to a semi rigid material that resists impact, shear and up to 120° C (higher temperatures can be tolerated for short periods of time or if joint is not unduly stressed.)

Typical bonding applications include glazing e.g. glass bevel bonding, bathroom accessories – cabinets, shower cubicles and glass furniture manufacture. UV620 is also ideal for structural bonding of artwork and architectural products where robustness and aesthetic appearance are both vitally important.

Permabond is a global, ISO 9001:2000 certified manufacturer of engineering adhesives and sealants for manufacturing, assembly, repair, and maintenance. Permabond manufactures cyanoacrylates (instant adhesives), anaerobics (for threadlocking, retaining, gasketing and pipe sealing), structural adhesives (one or two component epoxies and toughened acrylic adhesives), and UV - visible curable adhesives. Permabond custom formulates for unique requirements. Permabond products are sold worldwide through authorized distributors.
