PERMABOND® ET5428
Two-Part Epoxy
Technical Datasheet

Features & Benefits
- Ideal for bonding composite materials
- Easy to apply
- High shear and peel strength
- Rapid cure speed
- High temperature resistance
- Colour matched for FRP bonding

Description
PERMABOND® ET5428 is a thixotropic two part adhesive with excellent resistance to impact and vibration. The controlled flow properties as well as its ease of mixing and application, enables the adhesive to be used where gap filling is required. Permabond® ET5428 has been found to provide exceptional performance even at elevated temperatures.

Permabond® ET5428 has been specifically formulated for use in applications requiring toughness and high strength and shows special benefits in the construction of composite assembles.

Typical Performance of Cured Adhesive

Shear strength* (ISO4587)  
Mild steel: 18-22 N/mm² (2600-3200psi)
FRP Glass/Polyester: 6-9 N/mm² (900-1300psi)
FRP Glass/Epoxy: 24-28 N/mm² (3500-4000psi)
Carbon Fibre: 20-38 N/mm² (2900-5500psi)

Peel strength (aluminium) (ISO4578)  
150-250 N/25mm (33-55 PIW)

Hardness (ISO868)  
65-75 Shore D

Elongation at break (ISO37)  
<5%

Glass transition temperature Tg  
50-60°C (122-140°F)

Dielectric strength  
15-25 kV/mm

*Strength results will vary depending on the level of surface preparation and gap.

Graph shows typical strength development of bonded components. An increase of 8°C in temperature will halve the cure time. Lower temperatures will result in a slower cure time.

Additional Information

This product is not recommended for use in contact with strong oxidizing materials. Information regarding the safe handling of this material may be obtained from the safety data sheet.

Users are reminded that all materials, whether innocuous or not, should be handled in accordance with the principles of good industrial hygiene.

This Technical Datasheet (TDS) offers guideline information and does not constitute a specification.

Surface Preparation

Surfaces should be clean, dry and grease-free before applying the adhesive. Use a suitable solvent (such as acetone or isopropanol) for the degreasing of surfaces. Some metals such as aluminium, copper and its alloys will benefit from light abrasion with emery cloth (or similar), to remove the oxide layer.

Directions for Use

1. Dual cartridges:
   a) Insert the cartridge into the application gun and guide the plunger into the cartridge.
   b) Remove the cartridge cap and dispense material until both sides are flowing.
   c) Attach the static mixer to the end of the cartridge and begin dispensing the material.
2. Apply material to one of the substrates.
3. Join the parts. Parts must be joined within 10-20 minutes of mixing the two epoxy components.
4. Large quantities and/or higher temperature will decrease the usable life or pot life.
5. Apply pressure to the assembly by clamping for 30-45 minutes or until handling strength is obtained.
6. Full cure will be obtained after 24-48 hours at 25°C (77°F). Heat can be used to accelerate the curing process.
7. NB. Exercise caution when mixing large quantities due to exothermic reaction.

Storage & Handling

| Storage Temperature | 5 to 25°C (41 to 77°F) |
