

Permabond® 2-Part Epoxies

Permabond 2-part epoxy adhesives are suitable for bonding a wide variety of materials. Available with a range of different cure speeds to suit, Permabond epoxies have been developed to offer a high standard of performance for demanding bonding applications.

Substrates

Permabond 2-part epoxy adhesives will bond most engineering materials. They form excellent structural bonds to a wide variety of materials including metals, composites, wood and even some plastics.

Durability

Their excellent chemical and water resistance makes them suitable for harsh environmental conditions. These epoxies are an excellent choice for high-strength structural bonding.

Applications

Epoxies are widely used in the marine, automotive, aerospace, appliance, general assembly and construction industries. Applications are diverse and include bonding handles onto tools, aerospace structures, kitchen counter tops, motor housings and mounting brackets.

Material Selection

The high strength durable bonds formed with a vast array of substrates increases the designer's ability to choose the best substrates for the application.

Process

These 1:1 mix epoxies can be easily dispensed with a static mixing nozzle. No measuring or hand mixing is needed. Heat cure is not needed as the adhesives will cure at room temperature. For cure times faster than those stated on the chart on page 2, heat can be used to increase the speed of cure.

Joint Design

The high shear and peel strength of the bonds, coupled with the increased stress distribution of adhesives, greatly expands joint design possibilities.

Benefits

- High peel strength increases design versatility
- 1:1 mix ratio of most Permabond 2-component epoxies reduces equipment costs
- Durability increases material choices
- Rapid cure increases production rates
- Room temperature cure reduces equipment & energy costs
- Solvent free improves workplace safety
- Low odour improves workplace environment

Anaerobics

Thread lockers, Thread sealants, FIP Gasketmakers, Retaining Compounds

Cyanoacrylates

Instant adhesives, for rapid bonding of metals, plastics, rubber, and more.

Epoxies

Two-part (ET), Single-part (ES), and Modified Technology (MT) grades available

MS-Polymers

Single-part, moisture-curing, flexible sealants

Polyurethanes

Two-part room temperature curing adhesives

Toughened Acrylics

Rapid curing, high strength structural adhesives

UV Light Cured Adhesives

For glass, plastic, and metal with dual cure options.
