Permabond Threadlockers Help Prevent Tampering

SOMERSET, NJ - Permabond's anaerobic threadlockers are used on machinery and equipment to lock fasteners against loosening due to vibration. They are increasingly being used to tamper proof devices to validate warranties. Threadlockers cure to form a solid plastic seal between the metal fastener threads. If that seal is broken it is evident, even if the fastener is reset. This aids companies in determining if a device has been tampered with. More importantly – it serves as a reminder to those that may want a look inside that the warranty will be voided, thus preventing problems before they occur.

Permabond is a global, ISO 9001:2000 certified manufacturer of engineering adhesives and sealants for manufacturing, assembly, repair, and maintenance. Permabond manufactures cyanoacrylates (instant adhesives), anaerobics (for threadlocking, retaining, gasketing and pipe sealing), structural adhesives (one or two component epoxies and toughened acrylic adhesives), and UV - visible curable adhesives. Permabond custom formulates for unique requirements. Permabond products are sold worldwide through authorized distributors.
